**FOR IMMEDIATE RELEASE**

## **DairyComp Traceability Reporting Now Available**

Guelph, Ont. -- CanWest DHI is pleased to announce that Traceability reporting to the national database is now available through DairyComp herd management software.

The Trace module in DairyComp was launched in the Fall of 2017 and was setup to easily meet the on-farm recording requirements of the national Traceability program. The newly updated Trace module now also allows users to automatically report the collected information directly to the national database, at the push of a button or on an automated schedule.

According to Richard Cantin, Manager of Product Development and Marketing, "The goal for the new module was to make Traceability as easy as possible for producers. From record keeping, which allows producers to demonstrate compliance during on-farm audits, to the automated reporting of information to the national database, DairyComp streamlines the entire process of Traceability".

According to Ontario producer Dave Wagler, "The Trace module in DairyComp has made it so that meeting Traceability requirements has not increased my workload at all. You're not doing anything different than you were already doing – it's seamless".

DairyComp is offered exclusively by CanWest DHI in Canada, and provides producers with a powerful herd management tool to track and analyze every aspect of their dairy. DairyComp is also completely compliant with Canadian dairy industry programs, including CQM.

CanWest DHI is a milk recording organization providing profitable herd management solutions to dairy producers in Ontario and Western Canada.
